

1

ABSTRACT OF THE DISCLOSURE

2 A mobile phone handset has incorporated connectors and/or circuitries to connect to plain
3 ordinary telephone (POT) lines, various computing devices and/or a local area network
4 (LAN). The POT line connection, *e.g.*, a RJ-11 type connector, and the relevant circuitries
5 allow a user of the mobile phone handset to utilize many convenience enhancement features
6 of the mobile phone handset while at the same time taking advantage of the cheaper rate in
7 making a telephone call over the POT line. In addition, the LAN connections and the
8 connections to other computing devices allow the user to access the Internet (*e.g.*, the e-mail
9 network and/or the world-wide-web (WWW)) at a cheaper rate than the wireless access to the
10 Internet, and may provide a better user interface.
